

First of all part 4 will deal with:

1(and only one): Operating systems and their TAC addresses

Actually before I begin you must need to know:

To attach to system xx.x.x.xx, you type,"@o xx.x.x.xx"

The net will respond with:

tcp trying...

Eventually you'll get one of the following responses:

1)open...your connected

2)host dead...the net # isn't around any more or never was.

3)host not responding...forget it it's probably down. if you get anything else don't worry, contact me or something. If you don't connect and you wanna try another type:

"@c".if you don't it will say:

"can't"

---

Operating systems:

There are 31 different types of operating systems. I have listed all the net numbers run on that o.s. You'll hafta' see what they are. Don't worry that is the fun part!!!!!!!

Here you go:

1.cedar

10.2.0.32 Xerox

2.cmos

10.7.0.51

10.4.0.46

10.6.0.63

3.cms

26.4.0.92

4.ctos

26.1.0.116
