Preface

^^^^^^

This file represents and shows you how to gain access of the neighborhood IBM VM/370 Mainframe with tricks and tips it could save you hours of HELP file access in a few easy to learn lines.

First

Connection to a IBM VM/370 is easy!!. After connection (by modem or terminal in half duplex if acceptable) type:

(C/R) B

or

PB

or

SP

if it is a VM/370

it should come back with:

VM/370 online

then hit (C/R) or Space Bar

a dot (.) should appear. This is the main command prompt.

.

now

you must logon

Format:

.LOG (id) (password)

or

.LOG (id)

IBM370.TXT

ex:

```
.LOG OPERATOR SYSTEM  
or  
.LOG OPERATOR  
ENTER PASSWORD  
SYSTEM
```

Valid VM accounts built into the machine by IBM are:

```
OPERATOR      (for Operator status!)  
VMBACKUP      (memory backup account)  
PVM  
BATCH1
```

Operator status IS available via the dial-up with NO restrictions!! after entering your account (ID) the password can only be 8 characters maximum then you are in.

Once on you are in CMS status you should remain in CMS status to gain full appreciation of the IBM system. To check to see what status you are in hit (C/R) alone after the dot (.)

Ex:

```
.CMS  
.
```

or

```
.CP  
.
```

etc...

(Please note: CMS=Conversational Monitoring System)

and

(CP=Control Program. You don't want to be in this state type BEGIN)

if for some reason you witness a abnormal logon type

BEGIN

it will then reset your account and put you back into the normal mode of the machine

IBM370.TXT

(Note: all instructions are meant to be executed only in the CMS environment)

Q NAMES

lists useraccounts presently logged on

Q ALL

lists what/who owns the account memory etc..

LISTFILE

lists the current directory of the account

TYPE (filename)

Executes a CMS file similar to EXEC command.

for a help file listing type

HELP CMS

and

LOGOFF

logs you off the VM system

Here is a small list of VM systems
to experiment with:

on Telenet

=====

C 20120 C 21222

C 21253 C 51647

That's all dudes and hack on!
