        FILENAME EXTENSIONS:
        ===================

        Occasionally you will run across a BIG directory. This will
        hopefully not happen until you read more on VAX on my WHAT'S
        HACKING sub boards, but if it does, this list will hopefully help
        you avoid making too big a mistake or wasting a lot of time.

        ADA   Ada compiler source code file
        BAS   BASIC compiler source code file
        B32   BLISS-32 compiler source code file
        C   C compiler source code file
        COB   COBAL compiler source code file
        FOR   FORTRAN compiler source code file
        MAR   MACRO compiler source code file
        PAS   Pascal compiler source code file
        PLI   PL/I compiler source code file

        CLD   DCL command description file
        COM   DCL batch or command procedure file
        DAT   Data file
        DIS   Distribution file (as in mail)
        DIR   Directory file (as in a subdirectory)
        EDT   Command file for the EDT editing program
        EXE   Executable program
        HLP   Text for help libraries
        JOU   EDT editor journal when problems occur
        LIS   System listing file (as in TYPE, PRINT, & PHOTO)
        LOG   Batch job output file
        MAI   Mail message file
        MEM   DSR output file
        OBJ   Object code created by compiler before LINKing
        RNO   Source file for DSR
        SIXEL   Files for Sixel graphics
        SYS   System image file
        TJL   Journal created when the unusual occurs (DECNET a lot)
        TMP   Temporary file (sometimes valuable)
        TPU   Editor command file
        TXT   Text library input file (also MAIL output file)
        UAF   USER AUTHORIZATION FILE

VAX_7.TXT

        I will comment extensively on UAF files if I decide to type up
    another VAX tutorial.
