House Hold equivalants

```
-----
```

Name	Equivalent
----	-----
acetic acid	vinegar
aluminum oxide	alumia
aluminum potassium sulfate	alum
aluminum sulfate	alum
ammonium hydroxide	ammonia
carbon carbonate	chalk
carbon tetrachloride	cleaning fluid
calcium hypochloride	bleaching powder
calcium oxide	lime
calcium sulfate	plaster of paris
carbonic acid	seltzer
ethylene dichloride	dutch fluid
ferric oxide	iron rust
glucose	corn syrup
graphite	pencil lead
hydrochloric acid	muriatic acid
hydrogen peroxide	peroxide
lead acetate	sugar of lead
lead tetroxide	red lead
magesium silicate	talc
magesium sulfate	Epsom salts

HOMCHEM2.TXT

naphthalene	mothballs
phenol	carbolic acid
potassium bicarbonate	cream of tarter
potassium chromium sulfate	chrome alum
potassium nitrate	saltpeter
sodium dioxide	sand
sodium bicarbonate	baking soda
sodium borate	borax
sodium carbonate	washing soda
sodium choride	salt
sodium hydroxide	lye
sodium silicate	water glass
sodium sulfate	glaubers' salt
sodium thiosulfate	photographers hypo
sulferic acid	battery acid
sucrose	cane sugar
zinc choride	tinner's fluid
-----	-----

--] Smoke Bomb [=-
--- -----

Mix:

4 parts sugar
- -----
6 parts potassium nitrate

Heat:

over low flame till melts
stir well, then pour into
container. Before it sold-
ifies, put a few matches in
for fuses.
*One pound of this stuff will fill
a block nicely with a thick cloud
of white smoke*

--- -----

--] Generic bomb [=-
--- -----

- 1) Aquire a glass container
- 2) Put in a few drops of gasoline
- 3) Cap the top
- 4) Now turn the container around to
coat the inner surfaces and then evaporates
- 5) Add a few drops of potassium permanganate (<-Get
this stuff from a snake bite kit)

AFTER THROWING THIS THING RUN
LIKE HELL THIS THING PACKS
ABOUT 1/2 STICK OF DYNAMITE

```
(>                                     EXPLOSIVE INFO
=====
```

WHEN PETROLEUM JELLY AND POTASSIUM CHLORATE ARE MIXED IN A ONE TO ONE RATIO BY WEIGHT, IT MAKES A TOTALLY SAFE WET COMPOUND BUT WHEN DRIED IT BECOMES HIGHLY EXPLOSIVE AND SHOCK SENSITIVE.

MIX 3 GRAMS OF POTASSIUM IODIDE AND 5 GRAMS OF IODINE IN A BEAKER WITH 50 ML OF WATER. THEN ADD 20 ML OF AMMONIUM HYDROXIDE [AMMONIA WATER 10%]. FILTER THIS SUBSTANCE AND THE RESULTING SOLID IS CALLED NITROGEN TRIIODIDE. WHEN THIS IS WET IT IS SAFE, BUT WHEN DRY BECOMES VERY EXPLOSIVE AND SHOCK SENSITIVE.

(TO SET OFF ABOVE EXPLOSIVES, PUT THE MIXTURE ON OR IN SOMETHING THE DROP IT SORT OF LIKE AN IMPACT BOMB . IT, LIKE A HAND GRENADE, WILL EXPLODE ON CONTACT WITH ANOTHER OBJECT.)

=+=

THE JUG BAND BOMB

BY THE GRAY MOUSER

=====

THIS ONE IS SHORT AND SWEET.

- 1) GET AHOLD OF A GLASS JUG.
- 2) PUT IN A FEW DROPS OF GASOLINE.
- 3) CAP THE TOP.
- 4) NOW TURN THE JUG AROUND TO COAT THE

INNER SURFACES AND EVAPORATES.

5) ADD A FEW DROPS OF POTASSIUM
PERMANGANATE.(YOU CAN GET THIS REAL
EASY FROM A SNAKE-BITE KIT.)

6) THE BOMB IS DETONATED BY THROWING
OR FORCIBLY ROLLING AGAINST A SOLID
OBJECT.

WHEN THIS SUCKER GOES OFF IT IS THE
SAME AS A HALF STICK OF DYNAMITE.

Carbide Bomb

This is EXTREMELY DANGEROUS. Exer-
cise extreme caution....

Obtain some calcium carbide. This
is the stuff that is used in carbide
lamps and can be found at nearly any
hardware store. Take a few pieces of
this stuff (it looks like gravel) and
put it in a glass jar with some water.
Put a lid on tightly. The carbide will
react with the water to produce acety-
lene carbonate which is similar to the
gas used in cutting torches. Eventually
the glass will explode from internal
pressure. If you leave a burning rag nearby, you will get a nice fireball!

Portable Grenade Launcher

If you have a bow, this one is for you. Remove the ferrule from an
aluminum arrow,
and fill the arrow with black
powder (I use grade FFFF, it burns easy) and then glue a shotshell primer into
the hole left where the ferrule went.

Next, glue a BB on the primer, and you are ready to go!

Make sure no one is nearby. Littleshreds of aluminim go everywhere.

Auto Exhaust Flame Thrower

For this one, all you need is a car, a sparkplug, ignition wire and a switch. Install the spark plug into the last four or five inches of the tailpipeby drilling a hole that the plug can screw into easily.

Attach the wire (this is regular insulated wire) to one side of the switch and to the spark plug. The other side of the switch is attached to the positive terminal on the battery.

With the car running, simply hit the switch and watch the flames fly!!! Again be careful that no one is behind you! I have seen some of these flames go 20 feet!!!
