Well first of all I reccommend that you read the file on my board about landmines... If you can't then here is the conecept. You can use an m-80,h-100, blockbuster or any other type of elxplose that will light with a fuse. Now the way this works is if you have a 9volt batery, from a radio ctlred car or what ever and get either a solor igniter (preferably) or some steel wool you can create a remote ignition system. What you do it set up a schematic like this.

```

      ----->+ batery
steel ||          ->- batery
wool  ||          /
  :=:--- <--fuse  \
      ||          /
      ---- spst switch--\

```

So when the switch is on the currnet will flow through the steel wool or igniter and heat up causing the fuse to light.

Note: For use with steel wool try it first and get a really thin peice of wire and pump the current through it to make sure it will heat up to light the explosive.

```

```

Now the thing to do is plant your explosive wherever you want it to be but bury it and cover the wires obviously... Now take a this wire fishing line is good about 20 lb. test and tie one end of the wire to a secure object. Have your switch secured to seomthing to and make a

WOOLFUSE.TXT

loop on the other end on the line.  
Put the loop around the switch such  
that when pulled it will pull the  
switch and set off the explosive.

to ignite the explosive... The thing  
to do is to experiment with this  
and find your best method... Let me  
know on any good kills, or new  
techniques... On my board...
