DELUXE TRIMMER

The Hornady Deluxe Trimmer uses standard Hornady removable shell holder heads so you can use the same shell holder head in your trimmer or your Hornady Reloading Press.

The Hornady Deluxe Trimmer can be mounted on a bench or clamped in a vise, and is adjustable for all sizes of cartridge cases. It is easily converted to power trimming and is one of the fastest trimmers on the market.

ADJUSTMENT AND OPERATING PROCEDURE

1. To insert the correct shell holder head in the trimmer, turn shell lock knob counterclockwise until it is clear of shell holder head slot and insert correct shell holder head. Return shell lock to its original position.
2. To insert pilot, loosen set screw in cutter and insert pilot of correct size. Retighten set screw.
3. To adjust trimmer to desired length, pull handle out until stopped by lock ring. Turn shell lock counterclockwise until case can be slipped into shell holder. Turn shell lock back clockwise to lock case in shell holder. Loosen spindle lock screw and move spindle forward to backward until case touches cutter when cutter is in "full in" position, and pilot is in mouth of case. This is an approximate setting. A case that is of the correct length saved for setting trimmer will be a great time saver.
4. Tighten spindle lock screw. Rotate handle with a slight inward pressure. Pull back on handle removing pilot from case, release case by shell lock and remove case and measure. When correct length has been determined by this method, make sure spindle lock is tight and proceed to trim as follows: Insert case in shell holder, start pilot in mouth of case, lock case in place with shell lock, rotate handle with slight inward pressure.

NOTE: ALWAYS START PILOT IN MOUTH OF CASE BEFORE LOCKING CASE IN SHELL HOLDER

5. Cases should be chamfered and deburred with Hornady Chamfering and Deburring Tool.

POWER TRIMMING The Hornady Deluxe Trimmer can also be used as a power trimmer by removing arm and using 1/4 inch power drill in its place. All other operations being the same as for hand operation.

Hornady manufactures a complete line of shell holders and trimmer pilots to fit the Hornady Deluxe Trimmer. The removable shell holder heads are interchangeable with all Hornady Reloaders and most other popular cartridge reloading tools. They are manufactured to exact specifications and are precision cut from finest steel, then hardened. Hornady shell holder heads are unconditionally guaranteed. Hornady Trimmer Pilots are interchangeable in the Hornady Deluxe Trimmer and different pilots must be used with different caliber cartridges. The caliber list below is a convenient guide to help you determine which shell holder head and pilot you will need for the different calibers available.
