

List of Tables

			Page
Table	2-I.	Radioactive Decay	2-14
	2-II.	Specific Ionization of Radiation	2-19
	2-III.	Typical Neutron-to-Gamma and Neutron Dose-to-Total Dose Ratios	2-23
	3-I.	Radii of Effects of Nuclear Weapons	3-2
	3-II.	Failure of Overpressure Sensitive Structural Elements	3-9
	3-III.	Approximate Radiant Exposures for Ignition of Fabrics for Low Air Burst	3-16
	4-I.	Range of Lethality at Peak Overpressure	4-2
	4-II.	Ranges for Different Probabilities of Injury from Small Missiles	4-4
	4-III.	Probability of Penetration of Glass Fragments and Associated Kinetic Energy Related to Size and Velocity	4-4
	4-IV.	Translational Injuries	4-5
	4-V.	Ranges for Selected Impact Velocities of a 70-kg Human Body Displaced by Blast Wind Drag Forces for Different Yield Weapons	4-5
	4-VI.	Factors for Determining Probability of Second-Degree Burns to Bare Skin	4-7
	4-VII.	Incident Exposure Necessary to Cause Second-Degree Burns Under Clothing	4-7

		Page
Table 5-I.	Relative Biological Effectiveness	5-3
5-II.	Tissue Dose Rate at Various Distances Around a 37 KBq (1 μ Ci) Particle of Various Beta Emitting Materials (Range in Tissue 1-10 mm)	5-5
5-III.	Tissue Dose Rate at Various Distances from a 38 Mbq (1 μ Ci) Alpha Emitter	5-5
5-IV.	Relative Radiosensitivity of Various Organs Based on Parenchymal Hypoplasia	5-9
5-V.	Radiation Dermatitis	5-22
6-I.	Rule of Nines for Establishing Extent of Body Surface Burned	6-3
6-II.	Preliminary Triage of Casualties with Possible Radiation Injuries	6-22
7-I.	Biological Response to Nuclear Radiation and Medical Care of Casualties	7-8
7-II.	Shielding Properties of Common Materials from Fallout Gamma Radiation	7-11
7-III.	The 7:10 Rule for Residual Radiation Decay	7-12
