Preface

A ring-busy device is exactly what it states, when connected to a phone line it will cause a busy signal anytime a call is made to that particular line. The only thing odd that the calling party will recognize is one ring before the busy signal is actually heard, but no worry because the first ring will not be heard by the person with the device connected to their line. They can still use their phone to make outgoing calls which is great because this way they will not get suspicious. This little wonder is so easy to make all you need is a 7 k resistor and an enemy. This is particularly useful for your most hated local sysop. Hook this baby up and all of a sudden no one is calling his board anymore, they must not like it anymore cuz it's just a shitty little PD board revolving around Star Trek, oh well, I might as well give up." Mission accomplished!!!!!!!!!!!!!! I use to get my 7 k resistors at my local Radio HAcK, but on a recent attempt I was told that they do not carry them, but considering this Radio Hack was in phucking Hickville I was not surprised. I'm sure they can be found at any Radio Hack in your local metropolis, plus there are countless electronics catalogs that you will definitely be able to get them at. So onward to this simple process.

The Construction

Like I said before all you need is a 7 k resistor and access to the small box outside the victims house where the phone line line enters. The box is usually (every one that I have seen) is black. Once this box is opened you will see a number of terminals. If there is only one line coming into the house then there is only red and green terminals if there are two lines than there will also be a yellow and black terminal. Simply connect the 7 k resistor to the red and green terminals.(between them) R-7-G. For two lines the configuration goes Y-7-B. Got it? Your done. Go home and laugh your ass off.

Disclaimer

I hate this part, but here we go. This info is exactly that INFO. That is

RINGBUSY.TXT

what it is meant to be used as. Actually executing this plan is illegal, but then again what isn't these daze. Later!!

P.S. Hey Emporer I hope you get to read this cuz you are responsible for introducing me to this scene. I hope to see you back someday. Consider it, as we've said so many times before "We could get in trouble, but hey, what the phuck, it's worth it."

P.S.S Yo MEAT IS MURDER so change your phucking ways and remember the ALF is watching. You CAN'T hide.
