

Seed Saving : Peas

Peas are one of the easiest vegetables to save seed from.

Seperate varieties by 50 feet to ensure pure seed. Select the healthiest plants to save seed from. Allow pods to dry on the plant before harvesting and seperate seeds by hand. If birds are a problem, they can be harvested slightly green and brought indoors to finish drying.

Store in a paper bag (label) and in a glass jar and keep in a cool, dark, dry place
