

ANARC10.TXT

I received the Winter BRT (The Voice of the Flemish Community of Belgium!) schedule in the mail yesterday, 4 Oct. BRT is one of the few broadcasters who shift their schedule, though less often their frequencies, between summer and winter. This shift went into effect Sept. 30 this year. I find the printed schedule a bit confusing in the way they present their program listings, but I tried to summarize it here. In some cases, transmissions to a target may extend longer than I indicate. The schedule shows when a frequency starts but is unclear when it ends. I was very surprised to see that the morning English to N. America has been moved to 1400 from 1330. I don't often get the chance to listen at 1400 during Eastern Daylight Time, but I stepped outside today with my Sony 2002 and confirmed that Brussels Calling was being broadcast between 1400 and 1424 UTC, with a good signal on 21810.

Asterisks mark the English broadcasts. On Sundays, 1230 substitutes for 1400.
