

Ronny here.

This is a list of freqs in ascii format, delimited by commas.

If you have data base capability you can read them in and sort on them and print lists by area or freqs.

This list was from Monitoring Times Magazine and was obtained at a local ham store. Permission was asked before letting these out. Monitoring times ok'd it.

Data base fields to setup:

freq	- numerical	length-10	decimal 4 to right of decimal
mode	- alpha	-5	
name	- alpha	-68	
location	- alpha	-27	

If someone would like this in straight text (no commas) or smart format or dbaseiii format let me know.. no problem..
