

NEFBI.TXT

The following is a list of FBI Frequencies confirmed to be active within the last 6 months. Rhode Island, Mass., New Hampshire, and Maine operate as one system controlled by Boston, MA. Connecticut operates as a separate system controlled by New Haven, CT. Both systems use a PL Tone of 167.9 Hz.

Channel designations, if given, are for that system.

Both systems are still in the process of being changed so there may be future additions or changes to this list. Also, I monitor mostly in Eastern Connecticut and Rhode Island so there are probably more Repeaters in use in other areas which are not included here. Almost all Frequencies used as repeater outputs can also be used as car-car simplex.

As you can see this is a big change from the old system in that the Repeater Outputs are now the higher frequencies and the Inputs are low.

All Repeaters are computer controlled and have been cross linked in various combinations.

I would be interested in sharing information with anyone who is interested in Federal Monitoring in New England. Our little group here is interested in PERSONALLY CONFIRMED information such as Transmitter Locations, Input Frequencies, PL Codes, other access codes, etc. Some of the information we have is sensitive so please respond by U.S. Mail.
